

Receptor type	Description	Location
Free nerve endings	C - slow, unmyelinated	All skin
	Aδ - fast, myelin	Skin
Merkel's corpuscles	Large, myelinated	Giant
	Adapt quickly	
Pacinian corpuscles	Large, myelinated	Deep fibers
		Ligament
Merkel's discs	Large, myelinated fibers	Hair
	Adapt slow	

Peripheral Nerve

Epineurium: p connective (fascicles & BVS)

How good is your English?

- Many people feel the harder words are the longer ones: effervescent, uninhabitable, disenfranchisement.
- However, in my opinion the little ones are trickier! Big words usually very specific, whereas small words have many meanings.
- To show my point, all of these slides show three pictures. Each of the pictures represents ONE word.
- See if you can figure out what the pictures have in common.

CSF/CNS
Formed by three structures
1) Tight jxns b/w nonfenestrated capillary endothelial cells

Name: Mrs. Simpson
Date: April 4, 2018

Skill or Standard for focus / Objective: Standard I can determine and evaluate that an author uses to organize

(Cause and Effect)

"A writer might choose to use cause and effect to show the relationship between events or ideas."

CAUSE is "what happened"
EFFECT is "what happened"

"A cause can have more than one effect"

"Multiple causes can have only one effect"

"A writer might use cause and effect to explain how or why historical or scientific events happened."

Summary: Cause and effect is a type of text structure that shows how one event or idea made another one happen. A writer might choose to use this if they are trying to show the relationship between events or ideas.

Signal words

- because
- the reason
- as a result
- therefore
- due to
- which means
- since

"A writer might use cause and effect to explain how or why historical or scientific events happened."
